

JavaScript – In-built String Functions – Part 2

Practice Problems

Q. Answer the following questions. Also, explain why do you think that your answer is correct.

```
var str1 = 'Today is';  
var str2 = ' A beautiful day '  
var str3 = ' In Hawaii. '  
Result = 'Today is a beautiful day in Hawaii.'
```

1. Use the str1, str2, str3 to create the Result string. Keep the extra spaces, lowercase and uppercase letters in mind.

```
str1.concat(" " + str2.toLowerCase().trim() + " " + str3.substr(0,3).toLowerCase().trim() + str3.substr(3, str3.length)).trim()
```

```
var mStr = 'Mo Tu We Th Fr Sa Su'
```

2. Convert this string to an array that holds different days. Also, capitalize all the characters.

```
mStr.toUpperCase().split(' ')
```
