JavaScript – In-built String Functions – Part 1

Practice Problems

Q. Answer the following questions. Also, explain why do you think that your answer is correct.

> var mStr = "This is my test string to practice the JavaScript string function concepts. This is gonna be fun."

1. Find the length of the first sentence in the string. mStr.slice(0, mStr.indexOf('.')).length

2. Find the length of the second sentence in the string. mStr.slice(mStr.indexOf('.')+1, mStr.lastIndexOf('.')+1).trim()

3. Find the first and last occurrence of the word "This". mStr.indexOf('This') / mStr.lastIndexOf('This')

4. Find the sub-string with length 12 from the START of the string mStr. mStr.substr(0, 12)

5. Find the sub-string with length 12 from the END of the string mStr. mStr.substr(-12, mStr.length)
